Polyglas™ Armature Edging Tape

Polyglas™ armature edging tapes assist in the forming of good glass band edges during the process of applying armature banding tape. This edging tape is supplied in various bead and tape widths, referred to as a tail. The bead can be formed of rigid tubing or glass cords. The glass cords can be either treated or untreated with B stage resin. The tails are made of B-staged glass fabric. The B-stage glass fabric enhances the adhesion between the tail and the armature banding tape that will eventually be applying on top of the edging tape.

Following is a chart of standard sizes available in Polyglas™ Armature Edging Tape. Special beads and tails are available upon request. When ordering, treated or untreated cord must be specified.

Style Number	Bead Description	Tail Length
ET-3	1/8 Tube	1.00"
ET-4	3/16 Tube	1.50"
ET-5	1/8 Cord	1.00"
ET-7	3/16 Cord	.75"
ET-8	1/8 Cord	1.00"
ET-9	1/4 Cord	1.50"
ET-10	5/32 Cord	1.00"
ET-11	1/4 Cord	3.00"
ET-12	3/16 Cord	1.50"
ET-16	1/4 Cord	2.00"

Treated Polyglas® Edging has a one year shelf life when stored in sealed plastic bags at 70°F.
